C# / .NET Software Developer (Mid-level)

About the Job

Overview:

Now in our 10th year of operations, PS Solutions continues to expand and grow. This opportunity will be based out of our Carolinas' Office in Wilmington, NC.
We now have an opening for a C#/.NET Software Developer to join our team.

This opportunity gives you the chance to be part of a high performing team that is committed to producing the highest quality software.   If you want to work on a fast-growing end-to-end software solution focusing on innovation and product excellence in an agile web development environment, this just may be the opportunity for you..

Responsibilities:

As a C# / .NET Software Developer you will be an active member on a dynamic team. You'll need to be a seasoned professional in C# and .NET frameworks while also demonstrating flexible coding skills, problem solving, creativity and task & time management. Your role will include consulting directly with senior team members and clients to identify, code, test, debug, document, and maintain application enhancements. You are expected to have strong communication skills, attention to detail and a willingness to take responsibility for designing, coding, and testing software modifications. You will also be expected to assist with project plans, requirement documents, system documentation, and training materials.

Qualification Requirements:

Required Skills:

- A bachelor's degree in Computer Science or a related field or equivalent professional experience.
- 3-6 years' experience or combination experience, education, and sustained superior performance
- Seasoned professional in C# and .NET framework
- Ability to translate user requirements to software implementations by breaking down tasks into workable solutions
- Strong knowledge in Microsoft SQL server
- Excellent oral and written communications skills (both technical and non-technical)
- Excellent, proven problem solver
- Experience building complex software solutions that have been successfully delivered to customers
- Proven experience working in a web development environment with a strong understanding of MVC

Preferred:

- Familiarity with Microsoft Azure infrastructure
- Razor experience
- Experience working in source control applications like GIT or TFS
- Familiarity with JSON, XML files along with associated parsing and processing

- Experience in Agile/SCRUM development methodologies
- Experience with XCode using Objective C
- Experience with Android Studio and Java

Apply:

Send your resume to whippo@pssolutions.net. Tell us in the email why you think you would be a fit for this position, on this type of team at this location. Be prepared to prove that you have a passion for writing code, solving problems and will thrive in a fast-paced, ever-changing work environment.

Senior C# / .NET Software Developer – Wilmington, NC

Overview:

Now in our 10th year of operations, PS Solutions continues to expand and grow. This opportunity will be based out of our Carolinas' Office in Wilmington, NC.
We are looking for a Senior C#/.NET Software Developer to join a Dynamic and Growing Software Development Team.

This opportunity gives you the chance to be part of a high performing team that is committed to producing the highest quality software.   If you want to work on a fast-growing end-to-end software solution focusing on innovation and product excellence in an agile web development environment, this just may be the opportunity for you.

Responsibilities

- Participate as a member of a Scrum Development team
- Advise and coordinate with Product Owners on scope, risk, and development options to complete various projects
- Perform detailed code reviews and enforce development processes and code standards among team members
- Independently complete complex coding tasks as part of two-week sprint cycles
- Maintain current knowledge of the software development landscape and be prepared to introduce new approaches to the team
- Sustain and curate a comprehensive knowledge of coding and design
- Facilitate communication across the development team

Qualification Requirements:

Required

- Proven experience working in a web development environment with a comprehensive understanding of MVC
- At least 4+ years' experience or combination experience, education, and sustained superior performance
- Seasoned professional in C# and .NET framework
- Ability to translate user requirements to software implementations by breaking down tasks into workable solutions
- Strong knowledge in Microsoft SQL server
- Excellent oral and written communications skills (both technical and non-technical)
- Excellent, proven problem solver
- Proven experience building complex software solutions that have been successfully delivered to customers

Preferred

- Familiarity with Microsoft Azure infrastructure
- Razor experience
- Experience working in source control applications like GIT or TFS

- Familiarity with JSON, XML files along with associated parsing and processing
- Experience in Agile/SCRUM development methodologies
- Experience with XCode using Objective C
- Experience with Android Studio and Java
